FROM CONCEPT TO OPPORTUNITY

JPL Innovation Foundry

JPL's Innovation Foundry

jplfoundry.jpl.nasa.gov

- JPL supports the science community to ideate, mature, and propose concepts for new NASA missions
- Continuously “system engineer” requirements and solutions to develop compelling new missions
- The **JPL Innovation Foundry** is JPL’s engine for formulation of exciting, new space mission concepts

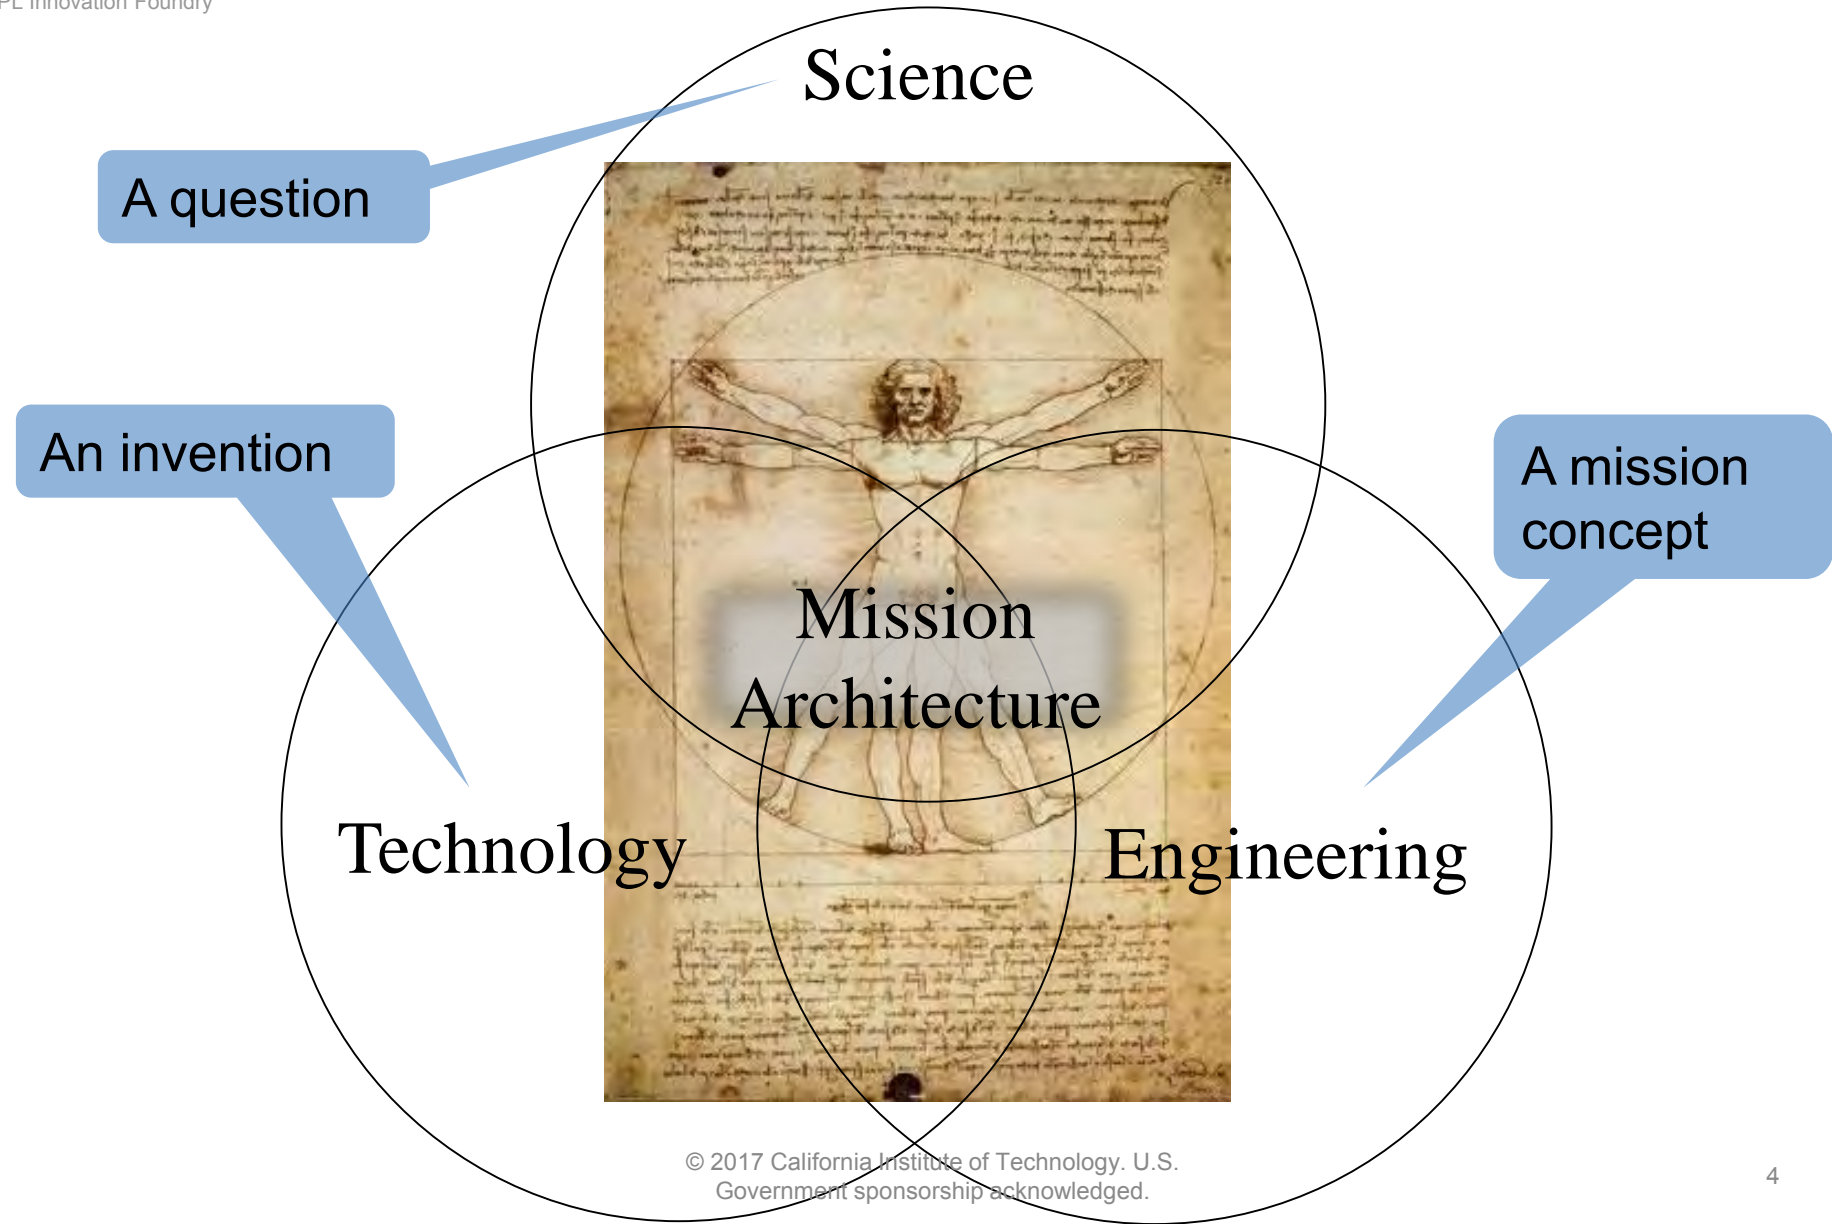

The Foundry Provides

- Method
 - Stable, reliable, clear, understood, exercised
 - Tailored for each stage of the formulation lifecycle
- Smart access to Subject Matter Experts (SMEs)
 - Standout SMEs (technical *and* programmatic)
 - On-demand when (but only when) needed
- Facilities
 - Optimized for pace and interactions of formulation
- Smart access to prior work
 - Thousands of engineered concepts, hundreds of vetted proposals, tens of PI-led missions already “in the can”
- Hands-on coaching of the formulation craft

JPL Innovation Foundry

Every mission starts with a spark

JPL Innovation Foundry

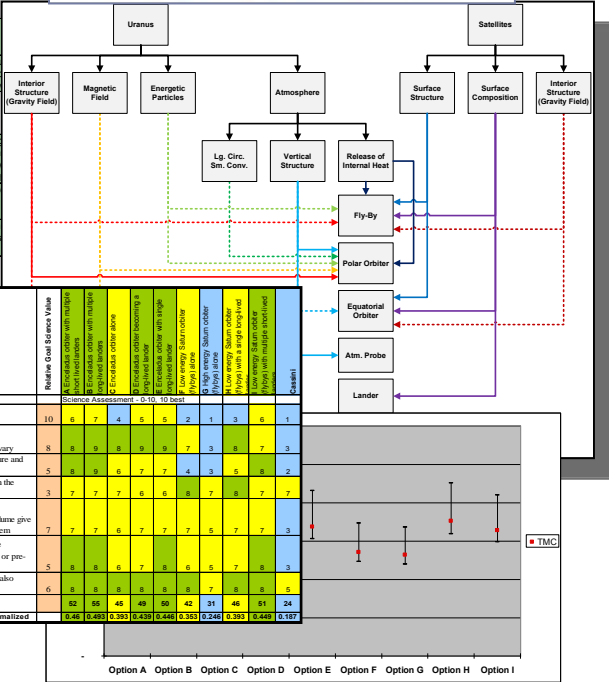

...then the concept is developed

or

Trades	Alternatives and Selection		
Launch vehicle	Atlas V	Delta IV-Heavy	Ares V
Cruise propulsion	SEP + GAs	Chemical + GAs	Propulsive on
Capture into Saturn system	Titan aerocapture (aerogravity assist)	Propulsive capture	
Pump-down mission design	Enceladus/Titan GAs only	Multiple moon GAs only	
RPS type	MMRTG	ARPS (advanced Stirling)	
Orbiter implementation	Enceladus Orbiter	Low-Energy Enceladus Multiple-Flyby (Saturn Orbiter)	
Lander/Probe implementation	Fly-Through Probes and Impactors	Rough Landers	
Number of landers	None	One	
Lander lifetime/duration	Short-lived (~2 weeks on primary	Long-lived (~1 year on RPS)	
Lander mobility type	St

JPL Innovation Foundry

A-Team Study Types and Examples

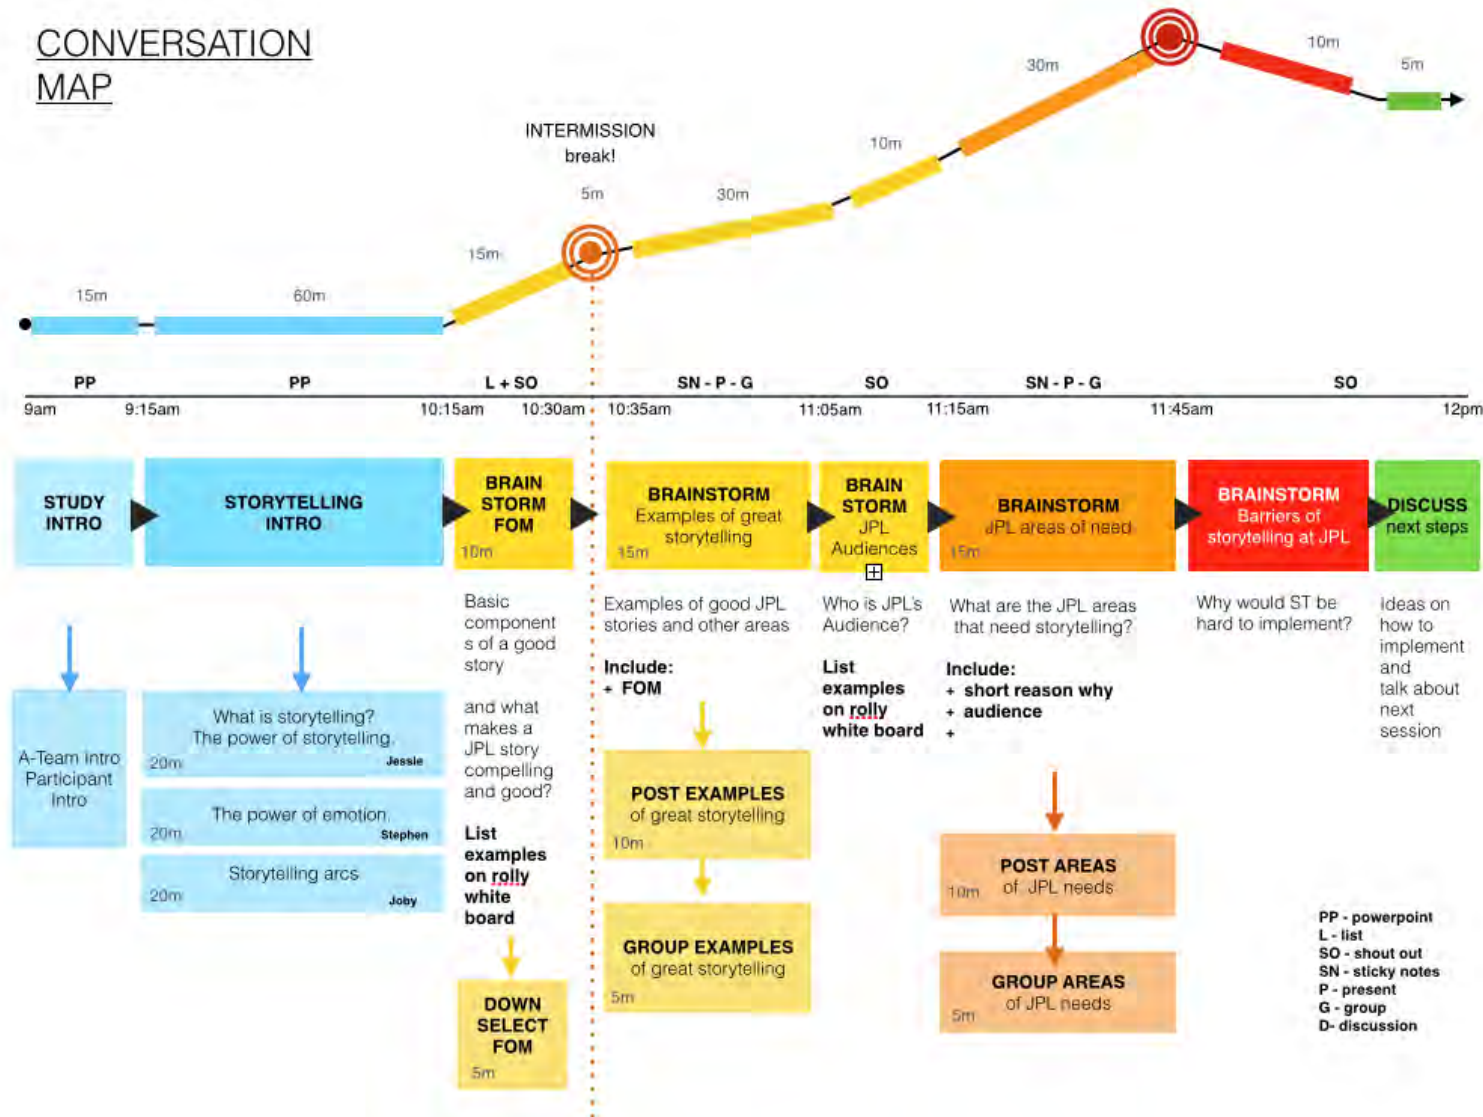

A-Team Process Overview

Example: Planning a Session

CONVERSATION MAP

Example Study: Origami in Space

JPL Innovation Foundry

Compact - Small Volume for launch deploy in space
Able to survive launch loads in compact form → lower loads Once deployed

Complexity Reduction - removal/simplify actuators, motors - a lot of motion from a few degrees of freedom - passive deployment

Reconfigurable - different surfaces, same element

Large Surface Area - Sails, arrays, shields

High Packing Efficiency Solar Sails for Small/Cube Sats

- Sketch (drawing or movie)**
- Description**

Large area membrane deployment -
Sail, antenna, solar array
→ propulsion application fold
Low pressure structure -
As large as possible, as small as possible
g/m², avoid density → Scale → Volume
- Benefits**

Higher packaging density vs. standard
2. fold + deploy method
Using cuts + slots yields 3x improvement
in packing density
Easier to get rid of outboard - better
for deployment
- Barriers**

Mathematically it works, but hard
to manufacture - need a sail life
machine? Or
do cut rid of folds - slit
Need a deployment mechanism + Tensile sail
- Next Steps**

Study, Demonstrate, Propose
Design fold lines to achieve best packing
using origami principles
Potentially use cuts or slots (very efficient
folding lines) to easy package
Need a hand's analysis 10 cm Origami
2.25 m x 2.25 m 20 m x 20 m - optional
Stress Fiber, Maximal (Maximal/Min) CM, 25
Need Deployment Mechanism + Tensile

Design Thinking and Visual Strategy

JPL Innovation Foundry

PLATFORM

- 1 GEO SATELLITES
- 2 COMMERCIAL COMM SATELLITES
- 3 NAVY COMM SATELLITES
- 4 INMAR SAT
- 5 IRIIDIUM
- 6 STATIONARY SITE
- 7 SATELLITE CONSTELLATION
- 8 ISS
- 9 CUBESAT CONSTELLATION
- 10 COMMERCIAL AIRCRAFTS
- 11 STRATOSPHERIC LONG-ENDURANCE DRONES
- 12 STRATOSPHERIC LONG-ENDURANCE DRONES
- 13 NANOSATELLITES
- 14 CONSTELLATION OF GNSS+Ka+L-BAND
- 15 SEA SURFACE GNSS CONSTELLATION
- 16 UNMANNED AERIAL VEHICLE
- 17 SATELLITE
- 18 SHORELINE, GROUND-BASED, FIXED
- 19 MID-INCLINATION
- 20 LEO CONSTELLATION
- 21 LEO CONSTELLATION
- 22 ORBIT PLANES

WAVELENGTHS

- K-band
- Ka-band
- Ku-band
- - - - L-band
- - - - S-band
- X-band
- ===== C-band
- - - - GNSS
- ===== Multiple

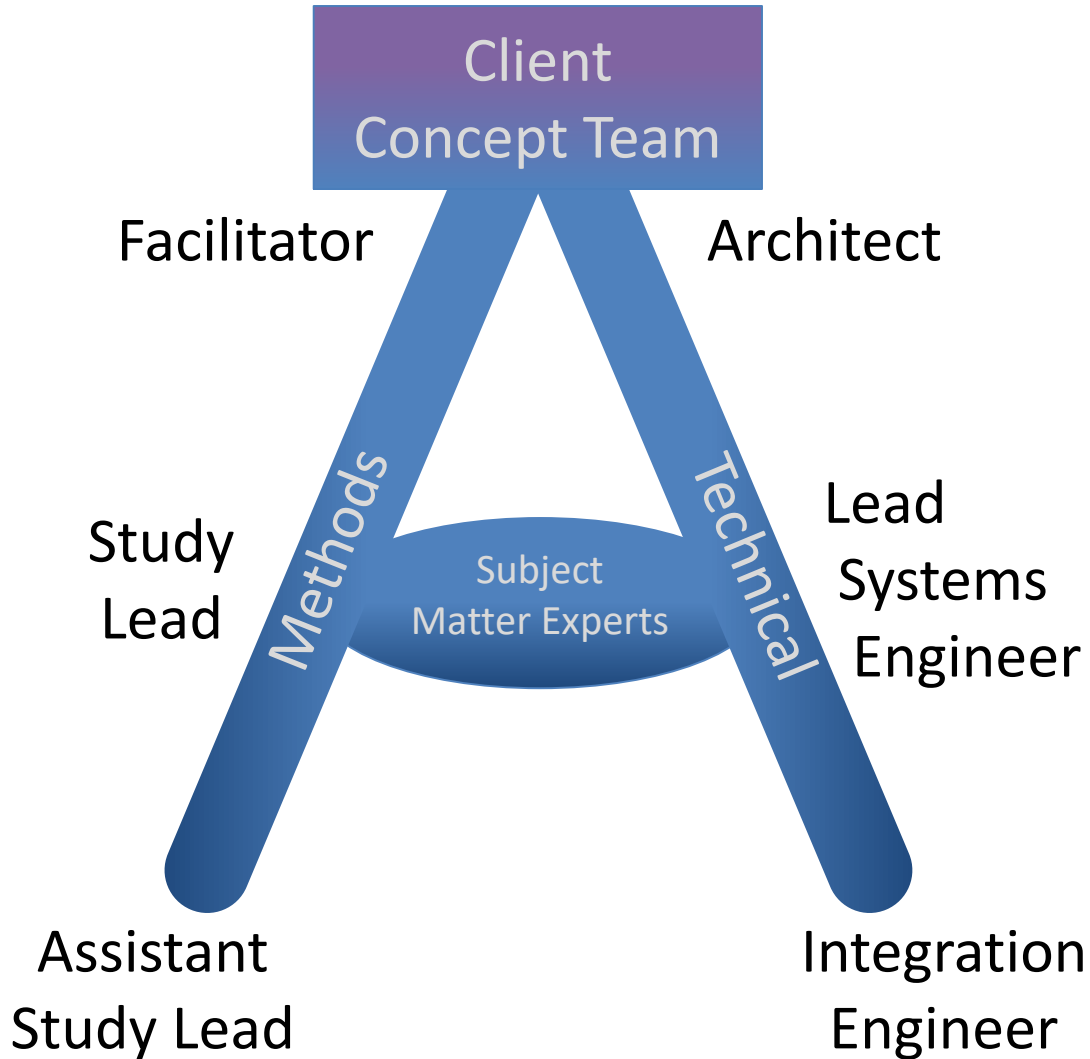

ICONS

- Satellites
- Cubesats
- Nanosats
- Drones
- International Space Station
- Blimp
- Commercial Aircraft
- Unmanned Aerial Vehicle
- Direct Broadcast Dish
- Public and Private Satellites

JPL Innovation Foundry

The “A-Frame”

- Each A-Team study has a 3-6 person “A-Frame Team” from two points of view:
 - Innovative Methods
 - Technical Expertise
- Additional subject matter experts are brought in as needed (customized)
- The client may also add members from the Concept Team

JPL Innovation Foundry

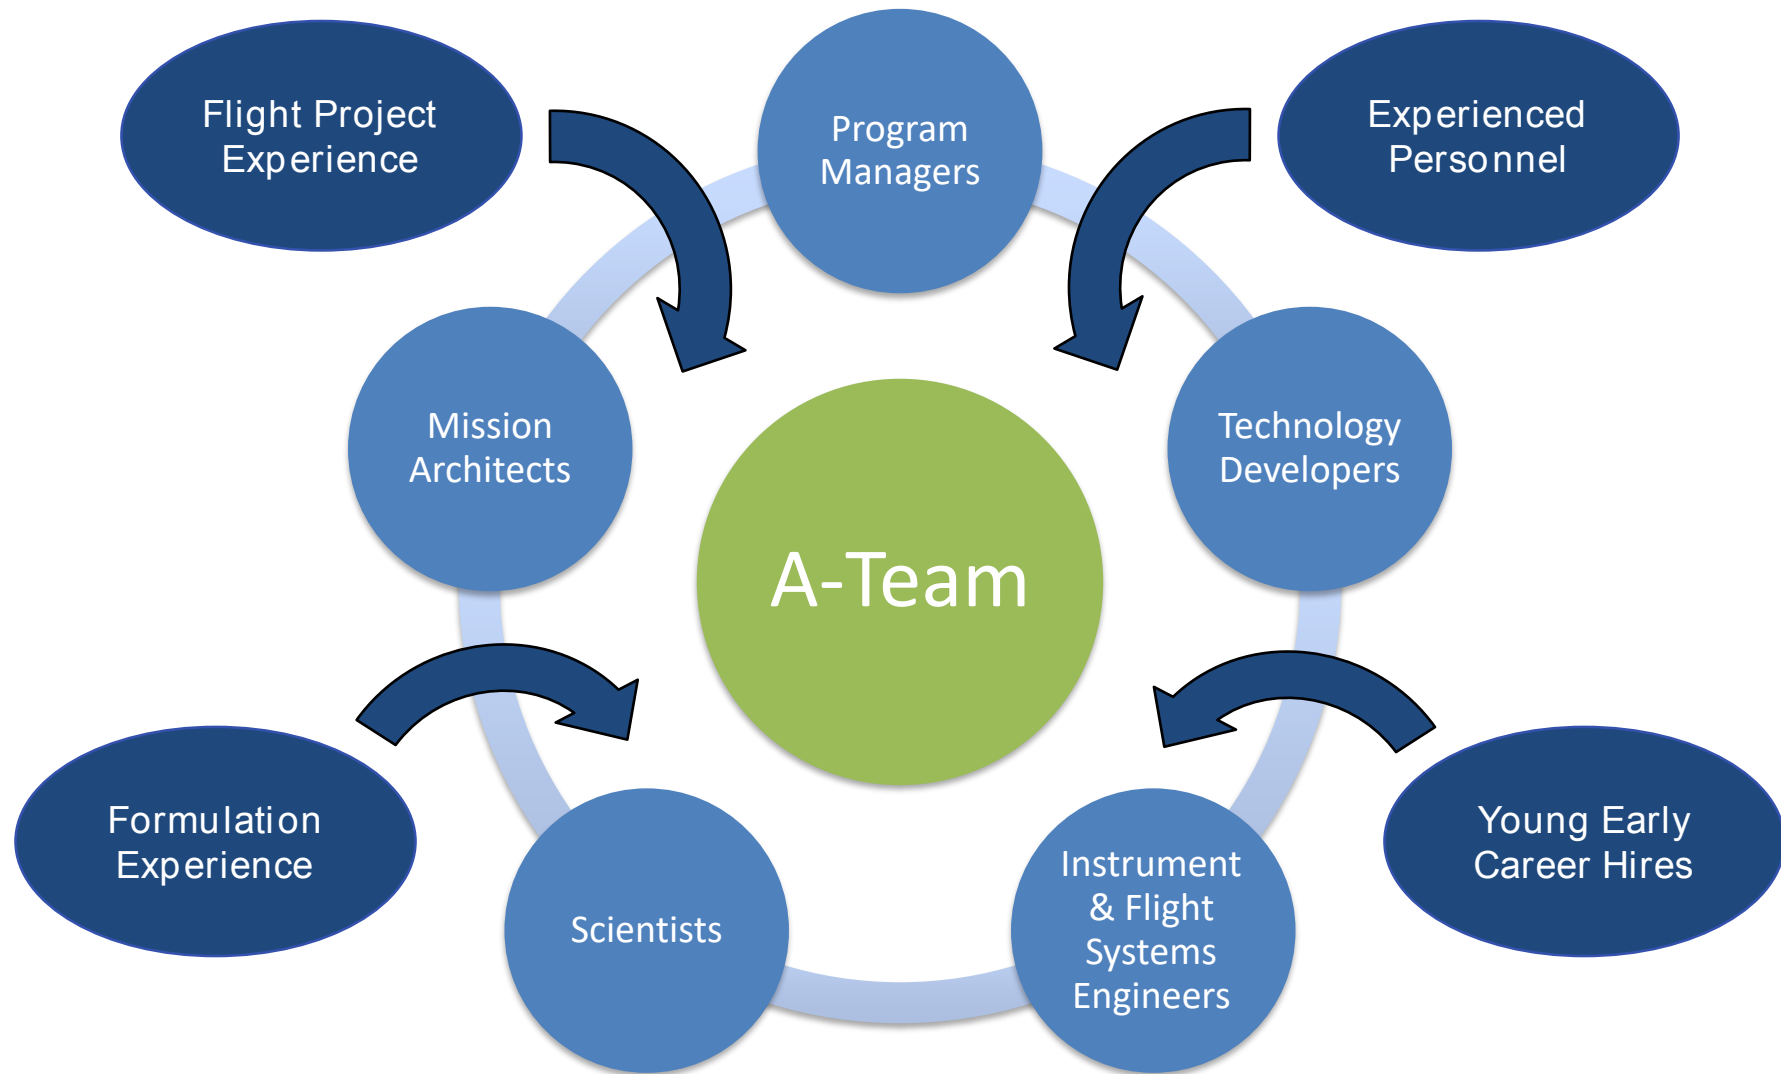

The A-Team Core

- The A-Team core is a set group of leaders to build best practices and expertise in the following areas:
 - Facilitation
 - Study Leadership
 - Knowledge Capture
 - Design Thinking
 - Tools and Infrastructure
 - Science
 - Instruments: Remote Sensing, In Situ, and Radar
 - Mission Design
 - Flight Systems and Architecture
 - Configuration
 - Technology
 - Cost and Risk
 - Data Science
- Positions are inherently rotational (1-3 year time frame)
- This group also leads the bulk of our studies

Key Aspect to A-Team Innovation: People

JPL Innovation Foundry

A-Team Methods

CML 1

Capturing ideas and linking associated ideas

Research, bringing in previous studies

CML 2

Testing assumptions, relationships, and links

Analyzing feasibility, finding FOMs and thresholds

CML 3

Building seed science cases and concept architectures

Analysis and trade space exploration

Rapid prototyping of concepts

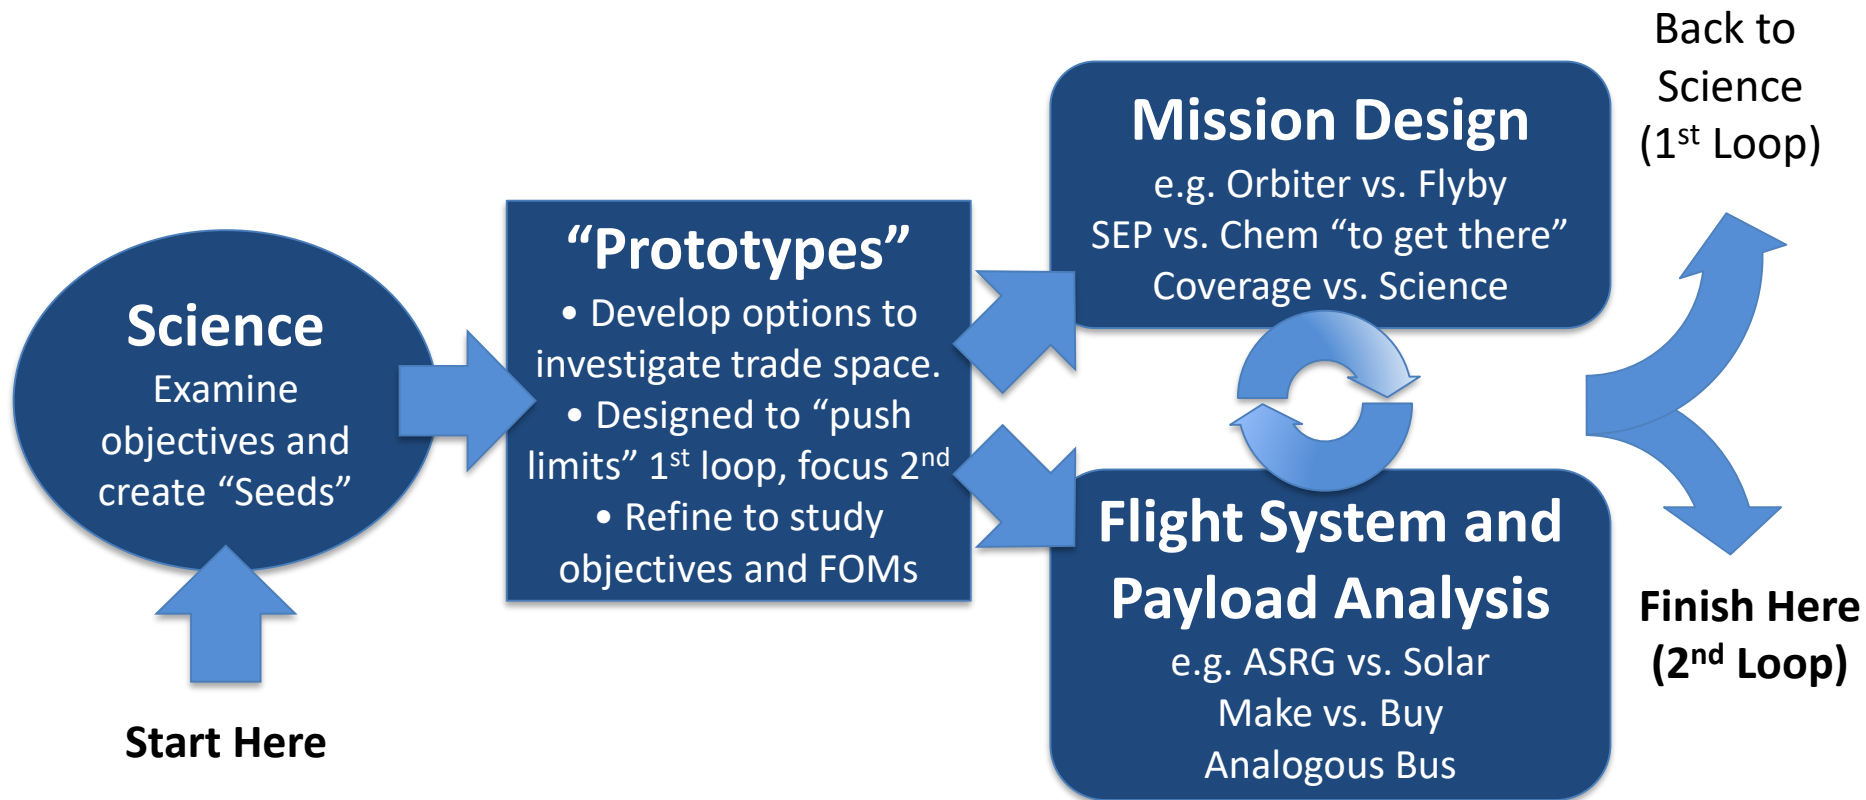

“A-Team” Mindsets

- **If you are in the room, you participate**
 - Be mindful, aware and in the moment
 - Make an effort to listen more than you speak
 - Be proactive – if you see a gap or missing role, fill it
- **We are a team of peers – that includes YOU**
 - Empathize and put yourself in different roles
 - Make your team members look good
 - Build on the ideas of others – “Yes, and...”
- **Foster trust and work at building respect**
 - Talk about crazy ideas not crazy people
 - What’s said in session stays in session
 - You have to give it to earn it
- **Encourage wild ideas and constructive play**
 - They inspire innovative, get that “last piece” concepts
 - Don’t ask for permission, plenty of forgiveness
 - Prepare yourself to be wrong (and be ok with it)
- **Prototype to create, test, learn, teach, then repeat to improve**
 - Get ideas quickly into the physical world and share
 - Discovery is key – learn something new every day
 - Celebrate failure – laugh it off!

Science-driven Study Process

- Often early parts of the study include scientists and instrument specialists to help define the science "seeds"
- CML 3 study requires multiple sessions, but the people are always involved as needed – no "flies on the wall"; updates available on wiki

A-Team Tools

- Knowledge Capture and Management
 - Wiki-based information sharing
 - IT software and capture hardware
- Science Traceability, Thresholds, and Value
- Mission, Flight System, and Payload Design
 - 5 minute mission design
 - “Baseball Cards” for flight systems
 - Physics-based instrument sizing tools
- Cost, Complexity, and Risk
 - CML 1, 2, and multiple CML 3 cost tools
- Mission Design for Chemical and SEP
- Trade-space rapid analysis tool
- Model-based tools and databases soon to be operational

JPL Innovation Foundry

Future Improvements

- Three new major initiatives
 - “Forging” Sessions
 - Technology Infusion
 - Trade Space Exploration
- Using our new infrastructure
- Getting out to a broader community
- Training new people and more roles
- Product development, speed, and quality
- Reviewing what we’ve done
- Tracking results post-study

Summary

From >200 studies, The A-Team is:

- An accessible and proven way for JPL to explore trade spaces and mature ideas into concepts
- A wealth of knowledge on early concepts, science investigations, and technology needs and impacts
- A reliable and configurable process
- A collection of people, ideas, and objects that promotes new connections and innovations at JPL
- A testing ground for new processes, tools and developing best practices in early concept formulation

JPL Innovation Foundry

>>10³ Team X Studies

Team X is a concurrent engineering team for rapid design and analysis of novel space mission concepts

- Backed by refined and validated, institutionally supported, integrated tools, models, and processes
- Staffed and backed by doing organizations
- Well-suited for all aspects of Pre-Phase A and Phase A design activities

JPL Innovation Foundry

What is Concurrent Engineering?

- Traditional Mission Concept Method – Serial

- Concurrent Engineering Approach – Parallel
 - Diverse specialists working in real time, in the same place, with shared data, to yield an integrated design

High Visibility Products for NASA

JPL Innovation Foundry

- Team X supported 16 mission concepts for Planetary Science Decadal Survey
- Team X supported 14 instrument and mission concepts for Astrophysics 2009 Decadal Survey

Broad Mission Concept Capabilities

- Space Missions
 - Planetary
 - Mars
 - Earth
 - Lunar
 - Astrophysics
 - Human/Robotics
 - S/C Constellations
- Flight Systems
 - Orbiters
 - Rovers
 - Landers
 - Aerobots
 - Smallsats
- Instruments
 - Remote sensing
 - *In situ*
